

## WHY FIT TESTER TRAINING?

Prior to issuing respirators to workers, Employers are required to ensure a fit test is performed to demonstrate an effective facial seal with the wearer. Instead of hiring an external “Fit Tester,” an Employer can have their own personnel perform internal fit testing for their workers.

However, assigned Fit Testers must be educated, trained and instructed in proper, industry-accepted protocols, according to [CSA Standard CAN/CSA-Z94.4-02, Selection, Use, and Care of Respirators](#), to be considered “qualified” to perform fit tests. Do you assign respirators to your workers to protect them from air contaminants? Do you need an internal, trained Fit Tester?

## WHAT WORKERS WILL LEARN

- ✓ Applicable regulations, CSA Standards, criteria
- ✓ Responsibilities, duties, obligations
- ✓ Types of respirators, components, functions
- ✓ Proper respirator selection, inspection, use, limitations, care
- ✓ Teaching donning/doffing and user seal check protocols
- ✓ Proper/efficient CSA fit testing protocols using various testing agents
- ✓ Fit test record completion
- ✓ Familiarization/review of key, related safety documentation

## END GOALS

Designed for the end user, this dynamic, engaging and modular course will help you achieve the following goals:

- Increased Fit Tester knowledge of relevant respiratory protection principles
- Practical qualitative fit testing skills for internally-assigned Fit Testers
- Minimization of risks/liabilities and maintaining due diligence through regulatory compliance
