### Interprovincial Safety Programming Survey

Mechanical Contractors Association of Canada (MCAC) has launched a Safety Program Harmonization Survey to better understand how differing safety programs, certifications, and requirements across provinces affect mechanical and electrical contractors. The goal is to identify challenges and support advocacy for policies that improve contractor mobility and reduce unnecessary duplication.

MCAM encourages all member companies and key staff to participate. Your input will help inform national advocacy efforts and industry best practices, particularly when engaging with government, owners, and other stakeholders.
