Proposed Regulatory Amendments to the Apprenticeship and Certification System

The Manitoba government is considering regulatory changes to the apprenticeship and certification system. Members from industry and the public have an opportunity to review the proposed regulatory amendments and provide feedback prior to implementation.

Amendments under consideration include:

1. Transition the apprentice to journeyman ratio from 2:1 to 1:1.
2. Transition the 46 voluntary trade regulations to Board By-laws.
3. Designate Powerline Technician as new Red Seal trades with certification through trades qualification only (no apprenticeship program).
4. Dedicinate the trades of CNC Machinist, Electric Motor Systems Technician, Floorcovering Installer, Rig Technician and Steel Fabricator.
5. Maintain certification for Concrete Finisher, Construction Craft Worker, Glazier, Pre-Engineered Building Erector, and Recreation Vehicle Service Technician, but discontinue the apprenticeship programs.

Comments submitted through the EngageMB platform will be considered until August 29, 2024.
